Pesticides DOCUMENTATION BULLETIN

U. S. DEPT. OF AGRICULTURE

Volume 1 Number 1
March 19, 1965

NATIONAL AGRICULTURAL LIBRARY · U.S. DEPARTMENT OF AGRICULTURE

FOREWORD

With this issue of the Pesticides Documentation Bulletin the National Agricultural Library inaugurates a specialized notification service as part of the Department's expanding research in pesticides and pest control. At present, the principal source materials for the Bulletin will be those in the Library. As the program expands, we will draw on the resources of other research libraries and institutions, both in this country and abroad.

It is our aim to make the Bulletin as complete as possible in coverage of this important field of research. A collateral aim is to put into the hands of researchers a key to published research material promptly using the current documentation technology. We are using a computer-generated, permuted title index known as the Keyword Index. There have been several improvements in the system since the appearance of the first Key-Word-In-Context Index. We believe that the most recent version shown here belongs in this category. We will be pleased to receive comments, criticisms, and suggestions on how we can improve this service.

PESTICIDES DOCUMENTATION BULLETIN

A BIWEEKLY PUBLICATION OF

NATIONAL AGRICULTURAL LIBRARY
U.S. DEPARTMENT OF AGRICULTURE

Volume 1 March 19, 1965 Number 1

SCOPE

The Pesticides Documentation Bulletin is an index to the literature on pest control, broadly defined. It includes diseases, pests, and parasites of plants and animals; pest, parasite, and disease control; entomology, in general; biological states of plants and animals as they are affected by chemicals and biologicals; weeds; and residues of economic poisons wherever found.

FORMAT AND USE

The Bulletin is a computer-produced permuted title index in three parts: Keyword Index, Bibliography, and Author Index.

KEYWORD INDEX. This is an alphabetic listing of significant words in titles. Each word has been lifted out and printed on the left margin of the column, followed by the listing of all titles containing that word. As a rule titles are left intact, although some are supplemented by inserting significant words taken from the text. These supplemental words are mainly the names of organisms and chemicals, and are shown within plus signs.

Words deemed insignificant are not printed as keywords; however, they are retained in their original place in the title. Words beginning with digits, such as some chemicals, are shown at the end of the alphabetic listing. Special characters which are not recognized by the computer as words, such as Greek letters, are spelled out.

Titles in foreign languages are given in English only, with the language of the text shown in parentheses after the title.

Having scanned the Keyword Index for significant words and having determined the likely title, the next step is to note the number which has been assigned to each title. This number locates the title in the Bibliography part where full bibliographic data about the title are given.

BIBLIOGRAPHY. This is both a numeric and an alphabetic arrangement of titles by their senior or primary authors. Titles having no authors are designated ZZ Anonymous and are listed at the end of the regular alphabetic listing.

Abbreviated names of the publications cited follow the form used in the Bibliography of Agriculture.

The last element in each citation is the National Agricultural Library classification number which should be used when requesting loans or reproduction of articles.

AUTHOR INDEX. All authors are indexed but the number is that of the senior or primary author.

AVAILABILITY OF REFERENCES CITED
